# Bilal Azwar

Dehiwala, Colombo, Sri Lanka | +94725946410 | bilalazwar@gmail.com | https://www.linkedin.com/in/bilal-azwar/

## Professional Summary

Software Engineer with 2+ years of experience in Product Support, Application Support, software development and technical troubleshooting. Experienced in supporting enterprise applications, investigating complex technical issues, analyzing logs and databases, and collaborating with different teams to identify root causes and solutions. Skilled in C#, .NET, Java, SQL, Azure, and tools such as Jira and ServiceNow. Strong technical foundation with a focus on problem-solving, customer satisfaction, and reliable application performance.

## Technical Skills

| | |
|---|---|
| **Languages:** | Java, C#, JavaScript, Python, SQL |
| **Frontend Development:** | React.js, HTML5, CSS3, Figma |
| **Backend Development:** | Node.js, Express.js, Spring Boot, .NET |
| **Databases:** | MySQL, SQL Server, MongoDB, Firebase |
| **Cloud and Deployment:** | AWS (Basics), Microsoft Azure, Vercel |
| **Tools & IDEs:** | Git, GitHub, Postman, Visual Studio Code, IntelliJ IDEA, Sitecore XP |

## Experience

**Software Engineer in Product Support Services |** IGT1 Lanka **(Client:** Sitecore**)** **Dec 2025 – Sep 2026**

- Provided technical product support to global customers and partners for Sitecore Experience Platform and Experience Manager Cloud.
- Investigated and resolved complex Sitecore product issues through root-cause analysis, debugging, and analysis of C#, ASP.NET/.NET, SQL Server, application logs, and configurations, collaborating with global customers, partners, and development teams to provide clear technical communication and support 24×7 operations.
- Developed and validated code fixes, SQL scripts and patches for customer-reported defects, reproducing and troubleshooting issues across development and production environments.
- Handled and escalated incidents across P1, P2, and P3 priority categories in line with SLA commitments and ITIL incident management processes, consistently closing tickets above the expected target count.

**Junior Application Support Engineer |** IPOSG - Colombo **Jan 2025 – Dec 2025**

- Provided end-to-end application support for the IPOSG EPOS system used by UK clients, including software updates and post-deployment troubleshooting.
- Used SQL queries to investigate database issues, validate data, and resolve application-related incidents.
- Managed escalated customer issues and collaborated with development and QA teams to investigate bugs and implement fixes.
- Coordinated software deployments and ensured timely communication with customers throughout the support process.

**Application Support Engineer Intern |** IPOSG - Colombo **Aug 2024 – Jan 2025**

- Performed manual software updates across multiple customer environments, ensuring smooth deployments with minimal disruption.
- Coordinated with UK clients and internal teams to schedule updates and manage deployment activities.
- Communicated new features and system changes to customers, addressing concerns and supporting successful adoption.

## Education

**University of Cardiff Metropolitan** **Jul 2025 – Aug 2026**
BSc (Hons) in Software Engineering Completed

**National Institute of Business Management (NIBM)** **2022 – 2024**
Higher National Diploma in Software Engineering GPA 3.66

**National Institute of Business Management (NIBM)** **2021 – 2022**
Diploma in Software Engineering GPA 3.91

**Hejaaz International School** **2010 – 2020**
G.C.E. O/L 2020: 4A, 1B, 1C, 2S

## Projects

**Smart Dental Analysis for Early Detection of Oral Diseases**
*Flask, MySQL, TensorFlow/Keras (custom CNN), JWT*

- Engineered a full-stack oral disease detection system that classifies dental images into six disease categories with 88.7% accuracy, using a custom-trained convolutional neural network.
- Designed a dentist verification workflow in which AI-generated predictions are reviewed and confirmed by a clinician before reaching the patient, balancing automation with clinical oversight.
- Built a role-based web application for patients, dentists and administrators, secured with JWT authentication and backed by a MySQL database.

**Pahana Edu**
*Core Java, React, MySQL, Git, JUnit | 3-Tier Architecture*

- Developed a full-stack bookshop management system covering sales, customer, user and stock management, along with sales, shift and transaction reports, designed around real business workflows.
- Applied SOLID principles, design patterns, Java Generics and Collections to produce a maintainable, well-structured three-tier codebase.
- Verified quality through JUnit and manual testing, produced UML documentation, and managed the code with Git, receiving positive feedback from over 76% of test users.

**Money Meter**
*MongoDB, Express, React, Node.js, Redux, Material-UI*

- Built a full-stack MERN web application for personal expense tracking and budgeting, using Node.js, Express, MongoDB (Mongoose), and RESTful APIs with a clean, modular backend architecture. Implemented secure JWT authentication and password hashing with bcrypt.
- Developed a responsive React frontend with Redux for state management, Material-UI, and integrated charts for visual reports.

**Craft of Ceylon (Team project)**
*Spring Boot, Spring Security, Eureka, API Gateway, React, Axios*

- Contributed to backend development of a microservices-based e-commerce platform using Spring Boot.
- Designed and implemented core services including Customer Service, Seller Service, Auth Service, Service Registry (Eureka), and API Gateway.
- Built secure RESTful APIs with JWT-based authentication via Spring Security and supported frontend integration using React and Axios.
